

SUNVIEW + APANET

the ABC
of ESP

ENERGY SAVINGS PLAN

EFFICIENCY FOR
A NEW ERA

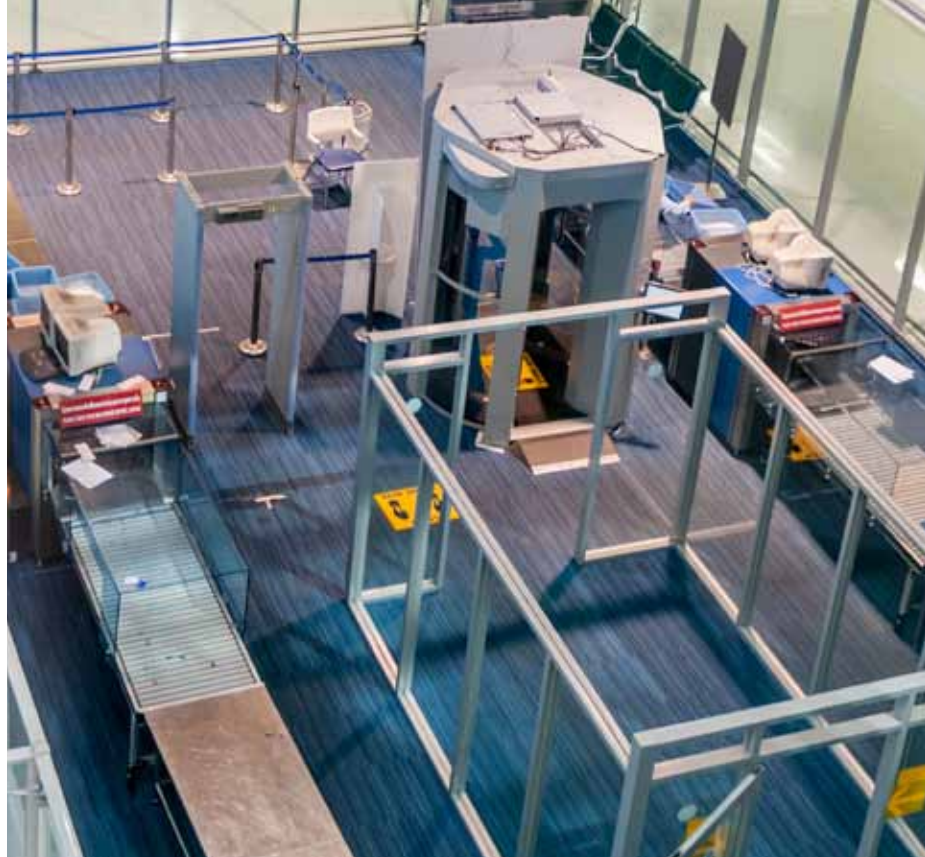

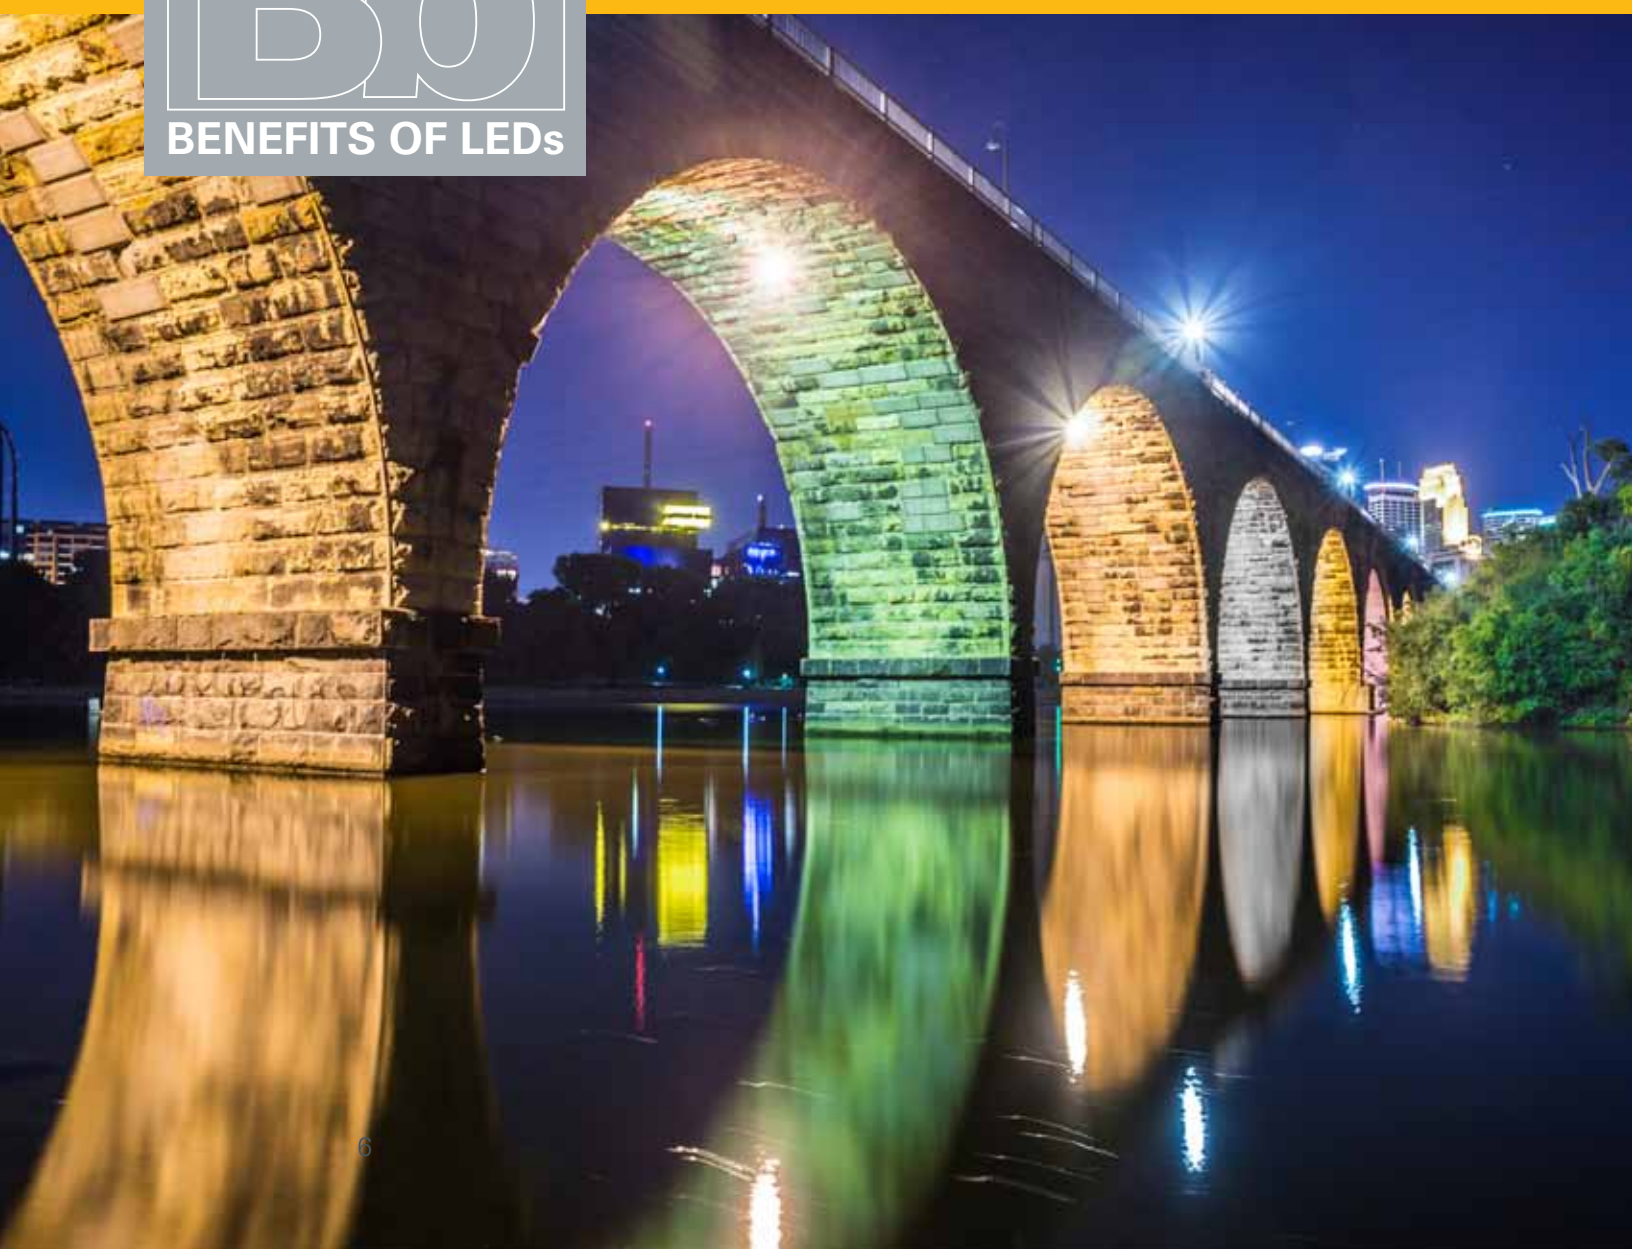

Who is SunView LED Lighting?

SunView LED Lighting is a unique environmentally conscientious company that combines breakthrough technologies for customized LED lighting solutions with affordable energy efficient programs. These programs offer a range of payment options from the savings due to the project implementation. This savings is due to the realized expense reduction that happens immediately upon the completed LED installation.

At SunView, we manufacture our own products. Therefore, we can design lighting for our customer’s specifications, needs, and budget. Our products are ecologically sound and contribute to a cleaner and greener world. Our customers enjoy the benefits of enhanced upgraded living and working areas, reduction in energy use, savings in electricity costs, and safer, healthier environments. Our customers receive dedicated detailed services to accommodate their needs into the future which provides a ‘win-win’ situation for all involved.

The ABCs of Our ESP

As we address our customer’s needs and concerns, we try to focus on the basics. We know our customers are busy trying to manage their businesses and/or organizational duties and responsibilities. Therefore, at SunView LED, we keep our approach simple: we simply want to provide our customers with the best products, technology, networking, and service in the industry. We offer a zero-money down program that offsets our customers having to find the financial resources to complete a retrofitted project. We offer multiple, flexible, and interoperable solutions that can address the various needs for retrofitted and custom design lighting solutions from many project perspectives. In fact, the first component of our “ABCs for our ESP” is Applications. The list in this catalogue is just a sampling of our application ability.

- Airports • 2
- Architectural Lighting • 6
- Art and Cultural Centers • 8
- Car Dealerships • 12
- Convenience Stores and Gas Stations • 14
- Educational Facilities • 16
- Energy Industries • 20
- Entertainment and Gaming Industry • 26
- Government and State Facilities • 30
- Healthcare Facilities • 32
- Hospitality Industry • 34

- Outdoor Environments • 44
- Parking Lots and Garages • 48
- Public Transportation • 49
- Recreational Facilities • 46
- Residential Areas • 50
- Resorts • 52
- Restaurant Industry • 54
- Retail Establishments • 56
- Sports Complexes • 58
- Street Lighting • 60
- Supermarket Industry • 62
- Transportation and Shipping Industry • 63
- Urban Areas • 64

The second component of SunView LED's ABC is 'Benefits.' Not only are there environmental, health, and aesthetic benefits to changing to LED use, there are financial incentive benefits that range from decreased expenses due to lower electricity usage, lower overall operations cost, and lower expenses for replacement bulbs due to the longevity of our LEDs. These benefits translate into our third ABC component, 'Costs.' Lower expenses, especially on utility bills from electric use, can be seen immediately after installation completion. The work or operational environment of an LED retrofitted installation improves the area and has a positive impact on those who work, visit, or use that area. This positive impact turns into financial benefits such as better worker productivity, positive occupant attitude, and in some applications, an increase in sales volume. The other part of our 'Cost' component is SunView's LED Energy Savings Plan (ESP). The plan is designed specifically for each customer's needs. Implementing this plan allows our customers to begin retrofitted installations without draining their financial resources in order to facilitate a project.

Why are SunView LED Lighting Solution Products Different?

SunView LED Lighting products are beyond comparison to other lighting products in the LED lighting industry. This real difference benefits our customers exclusively and places our products as the quintessential solution for lighting worldwide. We do not state this to compete with others in the industry. The reality is that our technology is so advanced, that we leave the rest of the industry to itself and move forward with the most innovative energy efficient and cost savings products available in the market today. Our competitors merely try to emulate us.

Our technology soars above our competitors. No one compares to the details of our luminosity, wattage, temperature range, and power factors. Our laboratories are constantly striving to bring to our customers the finest products in the Industry. Our components contain only the finest technology from Japan, Korea, and the United States. We never use inferior technology to reduce costs. This is why SunView LED Lighting leads the industry.

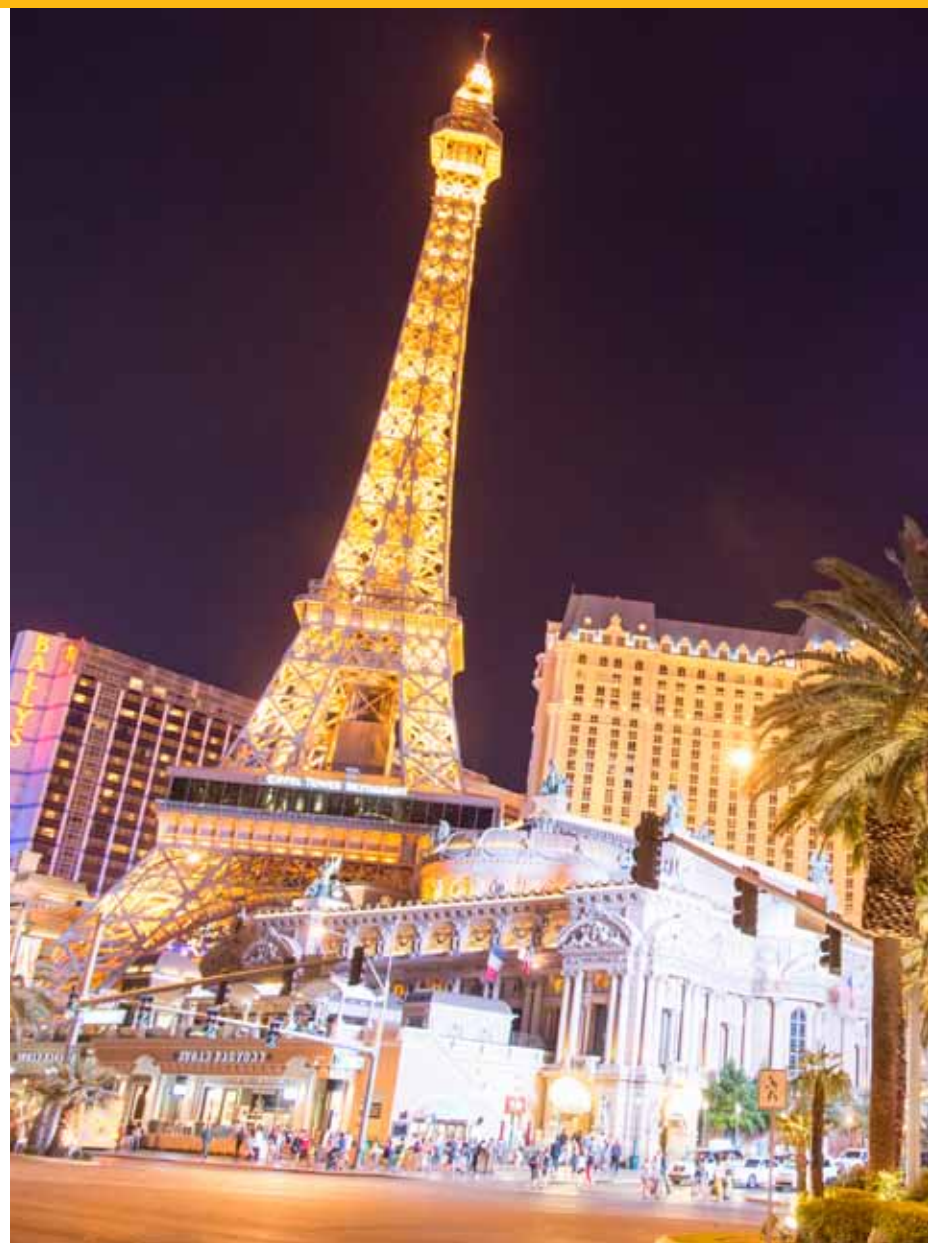

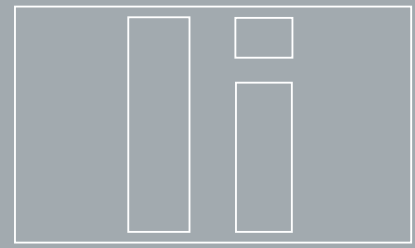

The SunView Advantage

- ❖ Highest lumens per wattage in the Industry
- ❖ Lowest wattage in the Industry
- ❖ Lowest LED light source temperature in the Industry
- ❖ Highest power factor in the Industry
- ❖ We utilize only the finest lighting technology from Japan, Korea, and the United States
- ❖ We manufacture and develop our own products
- ❖ Most interoperable capabilities in the Industry

What Distinguishes SunView LED Lighting?

Beyond our independent manufacturing status, ability to custom design bulbs, and the use of the finest technology for LED bulbs in the industry, we have a partnership with APANET Green Technology Systems that further indicates our determination to provide the most comprehensive lighting solutions possible. This gives our customers the ability to layer platforms for network application development into the future.

- SunView LED**
 - + APANET Green Technology Systems**
 - + Lon Mark Technology**
-
- Common Vision Partnership**

APANET Green Technology Systems is a preeminent company focused on the reduction of energy consumption by implementing better technological intelligence for use of that consumption. Their resourceful use of existing power line cable communication system and the LonMark standardized equipment of LonWorks open protocols and interfaces allows minimal investment costs while maintaining maximum flexibility and efficiency. As a result, it is possible to achieve energy cost savings that will be seen in a very short time. APANET is a member of LonMark International, a global standard setting organization whose aim is excellence in interoperable integration solutions.

The LonMark brand is one of the most recognized marks of excellence in the world. This organization helps member companies achieve global standardization acceptance, whether for open-system devices, programmable systems, or quality processes. Manufacturer's products certified by LonMark International benefit by the organization's long-time reputation as a global leader in the promotion and advancement of open control systems solutions. SunView LED has partnered with APANET because the two companies have a common vision and are totally aligned to the same progressive lighting solutions that form the basis of future energy use for the entire planet.

What Does SunView LED Lighting Deliver?

SunView LED Lighting's Retrofit Energy Savings Program (ESP) is a unique effective energy efficiency program that guarantees our customers savings and allows our customers to upgrade their facilities to state-of-the-art LED lighting technology. This ESP is designed to:

- ❖ Provide a real actual reduction in total costs of lighting including the electricity power cost attributable to lighting
- ❖ Offer the option of a no advance cost program as well as various financing options that can include payment at time of agreement
- ❖ Management of installation and provision of extra bulbs as per agreement over the warranty period at no extra cost
- ❖ Provide financing solutions that typically average five years and include a five year product warranty plan
- ❖ Provide a lock-in savings plan
- ❖ Offer a payment plan based on energy savings only
- ❖ Offer the highest technologically developed LED lighting in the industry with the lowest energy use enabling the highest return on investment

Another reason why SunView LED distinguishes itself from our competitors is that we assist our customers with any applicable incentives or rebates given to them for upgrading to environmentally safer and more energy efficient systems. We also never keep any percentage of those rebates or incentives. That money goes directly to our customers adding more financial incentives for you to use only SunView LED Lighting!

What is SunView LED's ESP?

Our partnership with APANET Green Technology Systems allows us to offer the most interoperable capabilities for lighting solutions in the industry. With this partnership, SunView LED Lighting can marshal designs for customized efficient lighting solutions. We offer our customers the advantage of immediate reduction in energy usage, immediate savings in electricity costs, a range of customized networking solutions, and the ability to move into the future with platforms that can tier networking programs able to integrate smart energy use. This can be applied to interoperable Smart Street Lighting, Smart Building, Smart City, and, eventually, Smart Grid demands.

With SunView LED Lighting, our customers receive the best savings over time, the finest product on the market, and one hundred percent of the benefit of our manufacturing and technology expertise. You will have the finest LED lighting components in the Industry. You will have the best interoperable networking system in the Industry. You will receive the highest quality service and support, as well as attention to detail. We will work with you at every phase of the project to guarantee your needs are met. We take great care to ensure that your project is completed according to your exact specifications and

in a timely manner. After completion, we will continue to be available for further consultation. We know the multi-tiered platform installation process requires detailed commitment into the future. Consequently, our customers receive our most thorough efforts to provide the maximum efficient options for your lighting solutions.

SunView LED Lighting not only offers the best, we are the best in the industry. We give our customers:

- ❖ The best of LED light bulbs
- ❖ The best of LED lighting solutions
- ❖ The best of interoperable installations
- ❖ The best of the above combination

Move Into The Future With Security and Confidence

The last component of the ABCs of our SunView LED's ESP is **'Zero-Money Down.'** Our adaptable and custom arranged Energy Savings Program will provide you with the ability to develop a lighting solution that will take you into the future with security and confidence. Contact us today. Every day that passes using legacy and outdated lighting and networking means wasted time, resources, and money. Let us help you conserve and control your resources! Contact our Representatives and let us demonstrate to you the effective, efficient, affordable, flexible, and reliable SunView LED Lighting difference. Allow us to give YOU the best the market offers. You will not regret the inquiry!
